## Statement of Purpose

The purpose of the Installation Action Plan (IAP) is to outline the total multi-year restoration program for a Regional Readiness Command (RRC). The plan identifies all Installation Restoration Program (IRP) requirements and proposes a comprehensive approach and associated costs to conduct future investigations and remedial actions at each IRP site.

In an effort to coordinate planning information between the IRP manager, installation/RRC, executing agencies, and regulatory agencies, an IAP has been completed for the 88th RRC. The IAP is used to track requirements, schedules and tentative budgets for all major Army installation/RRC restoration programs.

All site specific funding and schedule information has been prepared according to projected overall Army funding levels and is therefore subject to change. Under current project funding, all remedial actions will be in place for the 88th RRC by the end of 2008.

The following agencies contributed to the formulation and completion of this 2006 Installation Action Plan for the 88th Regional Readiness Command during a planning meeting held on 13-16 February 2006:

**Company/Installation/Branch**

US Army Environmental Center

IMA-ARO

Engineering & Environment, Inc. for USAEC

88th Regional Readiness Command/JMWA Contractor

## Acronyms & Abbreviations

AEC	Army Environmental Center
AEDB-R	Army Environmental Data Base - Restoration
AOC	Area of Concern
AST	Aboveground Storage Tank
BTEX	Benzene, Toluene, Ethylbenzene, and Xylene
CA	Corrective Action
CAP	Corrective Action Plan
CERCLA	Comprehensive Environmental Response, Compensation and Liability Act of 1980
CMB	Compliance Management Branch
CMS	Corrective Measure Study
CS	Confirmatory Sampling
CTT	Closed, Transferred, or Transferring
CY	Cubic Yards
DA	Department of Army
DD	Decision Document
DEH	Directorate of Engineering and Housing
DERA	Defense Environmental Restoration Account
DERP	Defense Environmental Restoration Program
DOD	Department of Defense
DOL	Directorate of Logistics
DPHVE	Dual-phase, high-vacuum extraction
DPW	Directorate of Public Works
DSERTS	Defense Site Environmental Restoration Tracking System
EECA	Engineer Evaluation and Cost Analysis
PA	Environmental Protection Agency (US)
ER,A	Environmental Restoration, Army (Formerly DERA)
FORRCOM	US Army Forces Command
FS	Feasibility Study
FY	Fiscal Year
GWM	Groundwater Monitoring
HSWA	Hazardous and Solid Waste Amendment
HW	Hazardous Waste
IAG	Interagency Agreement
IAP	Installation Action Plan
ILEPA	Illinois Environmental Protection Agency
IDEM	Indiana Department of Environmental Management
IR	Information Repositories
IRA	Interim Remedial Action
IRP	Installation Restoration Program
JRTC	Joint Readiness Training Center
LTM	Long-Term Monitoring
LTO	Long-Term Operation
MACOM	Major Army Command
MCL	Maximum Contaminant Level

## Acronyms & Abbreviations

MNA	Monitored Natural Attenuation
NE	Not Evaluated
NFA	No Further Action
NFRAP	No Further Remedial Action Planned
NON	Notice of Noncompliance
NOV	Notice of Violation
NPL	National Priorities List
OEPA	Ohio Environmental Protection Agency
OMA	Operations and Maintenance - Army
OWS	Oil/Water Separator
PA	Preliminary Assessment
PA/SI	Preliminary Assessment/Site Investigation
PAH	Polycyclic Aromatic Hydrocarbons
PCB	Polychlorinated Biphenyls
POL	Petroleum, Oil and Lubricants
PPB	Parts Per Billion
PPM	Parts Per Million
PY	Prior Year
RA	Remedial Action
RA(C)	Remedial Action (Construction)
RA(O)	Remedial Action (Operation)
RAB	Restoration Advisory Board
RAP	Remedial Action Plan
RC	Response Complete
RCRA	Resource Conservation and Recovery Act
RD	Remedial Design
RECAP	Risk Evaluation/Corrective Action Program
REM	Removal
RFA	RCRA Facility Assessment
RFI	RCRA Facility Investigation
RI	Remedial Investigation
RIP	Remedy-in-Place
ROD	Record of Decision
RRSE	Relative Risk Site Evaluation
S&A	Supervision and Administration
S&R	Supervision and Remediation
SAP	Satellite Accumulation Point
SI	Site Inspection
SVOC	Semi-Volatile Organic Compounds
SWMU	Solid Waste Management Unit
TCE	Trichloroethylene
TPH	Total Petroleum Hydrocarbons
TRADOC	Training and Doctrine Command
TRC	Technical Review Committee
USACE	US Army Corps of Engineers

---

## Acronyms & Abbreviations

USACHPPM	US Army Center for Health Promotion and Preventive Medicine
USAEHA	US Army Environmental Hygiene Agency
USARC	US Army Reserve Center
USATHAMA	U S Army Toxic and Hazardous Material Agency (replaced by AEC)
UST	Underground Storage Tank
UXO	Unexploded Ordnance
VOC	Volatile Organic Compounds
WDNR	Wisconsin Department of Natural Resources
yr	year

## Installation Information

**Installation Locale:** The 88th Regional Readiness Command (RRC), headquartered at Fort Snelling, Minnesota, includes 25,000 citizen-soldiers serving in 271 units located in Illinois, Indiana, Michigan, Minnesota, Ohio, and Wisconsin. The vast majority of these facilities are US Army Reserve Centers, although some facilities are strictly used for storage or maintenance. Within the RRC, approximately 189 USAR centers have vehicular maintenance capabilities - referred to as Organizational Maintenance Shops (OMS). The RRC has 32 Area Maintenance Support Activity (AMSA) facilities and one Equipment Concentration Site (ECS). In addition, the 88th RRC has enclaves (multiple facilities) at Fort Sheridan, Illinois; Fort Benjamin Harrison, Indiana; Fort Snelling, Minnesota; and Milwaukee, Wisconsin.

The 88th RRC consists of 189 reserve centers and 500 properties located on 7,000 acres of land within a six state region (IL, IN, MI, MN, OH, and WI).

### **Installation Mission:**

The missions of the 88th RRC are:

- Command, control, and support of all assigned units
- Supervise all USAR Area Maintenance Support Activity (AMSA) in the RRC area
- Support of all USAR units within the region
- Mobilization
- Reconstitution
- Provide “Peacetime Housekeeping” support to USARC Direct Reporting Commands

**Lead Organization:** Installation Management Agency – Army Reserve Office (IMA-ARO)

**Lead Executing Agencies:** US Corps of Engineers, Kansas City District Office.

### **Regulator Participation:**

#### **Federal:**

USEPA, Region 5

#### **State:**

Illinois Environmental Protection Agency (ILEPA)

Indiana Department of Environmental Management (IDEM)

Michigan Department of Environmental Quality (MDEQ)

Minnesota Pollution Control Agency (MPCA)

Ohio Environmental Protection Agency (OEPA)

Wisconsin Department of Natural Resources (WDNR)

**National Priorities List (NPL) Status:** Not on NPL.

### ***Installation Restoration Advisory Board (RAB)/Technical Review Committee (TRC)/Technical Assistance for Public Participation (TAPP) Status:***

The 88th RRC is currently a stakeholder in a RAB hosted by the COE FUDS Program, along with the community of Marion, OH for sites at LTA, Marion Engineering Depot and the Scioto Ordnance Plant (MED/SOP). Formerly, the 88th RRC was a co-chair for this RAB (beginning on July 26, 2001). When USAEC began centrally-managing the Marion LTA project in 2004, the 88th RRC resigned as co-chair and was replaced by the COR of the PBC. The 88th RRC is a stakeholder for the Fort Sheridan, IL BRAC Closure Team (BCT). The 88th participates in monthly BCT Meetings and quarterly RABs.

### ***Installation Program Summaries***

#### ***IRP***

Primary Contaminants of Concern: TCE, VOCs, SVOCs, Heavy Metals

Affected Media of Concern: Soil, Groundwater

Estimated date for Remedy in Place (RIP)/Response Complete (RC): 2006/2011

Funding to Date: (up to FY05): \$3,096K

Current year funding (FY06): \$7K

Cost-to-Complete (FY07+): \$679K

#### ***MMRP***

Primary Contaminants of Concern: MEC, MC

Affected Media of Concern: Soil

Estimated date for RC: 2017

Funding to Date (up to FY05): \$25K

Current year funding (FY06): \$0

Cost-to-Complete (FY07+): \$6,975KK

## Cleanup Program Summary

### ***Installation Historic Activity:***

The 88th RRC was organized from four ARCOMs - the 83d, 86th, 88th, and the 123d, along with other Army Reserve units located throughout the Upper Midwest. It is composed of 9 major subordinate commands (MSCs). These commands are made up of engineer, medical, ordnance, transportation, supply, military police, and military intelligence units. These units are the 644th Area Support Group (ASG), the 300th Military Police Command, the 303d Ordnance Group, the 330th Medical Brigade, the 336th Transportation Group, the 643d ASG, the 645th ASG, 8th Army Augmentation (CONUS), and the 646th ASG, and the Regional Support Group.

### **IRP:**

- Prior Year Progress: RI was completed at the Marion LTA. Additional investigation was conducted at the Kings Mills USARC, as well as a DPHVE pilot study. Data supporting NFA was sent to WDNR for USARC Milwaukee. A PA/SI was completed for Granite City (GC-1) USARC.
- Future Plan of Action: Achieve Response Complete at Marion LTA and Kings Mills USARC. Conduct further investigation and initiate remedial action at Granite City.

### **MMRP:**

- Prior Year Progress: Historical Records Reviews (HRR) were completed at Fort Snelling and Fort Sheridan.
- Future Plan of Action: No further action planned at Fort Snelling. Conduct SI at Fort Sheridan.

# 88TH REGIONAL READINESS COMMAND

## Installation Restoration Program

**Total AEDB-R IRP Sites/AEDB-R Sites with Response Complete:** 1202/1200

**Different Site Types:**

40 Above Ground Storage Tanks	2 Burn Areas
50 Contaminated Buildings	10 Contaminated Groundwater
1 Contaminated Sediments	2 Contaminated Soil Piles
12 Disposal Pits/Dry Wells	1 Drainage Ditch
3 Explosive Ordnance Disposal Areas	5 Fire/Crash Training Areas
12 Firing Ranges	2 Incinerators
23 Landfills	2 Leach Fields
2 Maintenance Yards	48 Oil Water Separators
196 Other	2 Pesticide Shop
2 Pistol Ranges	1 Radioactive Waste Area
1 Sewage Effluent Settling Ponds	3 Sewage Treatment Plants
8 Small Arms Ranges	35 Spill Site Areas
437 Storage Areas	83 Surface Disposal Areas
1 Surface Impoundment/Lagoon	1 Surface Runoff
154 Underground Storage Tanks	1 Underground Tank Farm
44 Unexploded Munitions/Ordnance	12 Washracks
1 Waste Line	5 Waste Treatment Plants

**Most Widespread Contaminants of Concern:** TCE, VOCs, SVOCs, Heavy Metals

**Media of Concern:** Groundwater, Soil

**Completed Removal (REM)/Interim Remedial Action (IRA)/Remedial Action (RA):**

To date, no REM/IRA/RAs have been conducted at the 88th RRC IRP sites using ER,A funding.

**Total IRP Funding:**

Prior years funding (up through FY05):	\$3,096K
Current year funding (FY06)	\$ 7K
Future Requirements (FY07+)	\$ 679K
Total:	\$3,782K

**Duration of IRP:**

Year of IRP Inception: 1984

Year of IRP RIP/RC: 2006/2011

Year if IRP Completion (including Long-term Management): 2011

# IRP Contamination Assessment

## ***IRP Contamination Assessment Overview***

The main site types for the 88th RRC are waste disposal sites and abandoned landfills. The main contaminants of concern at these sites are VOCs, SVOCs, and RCRA Metals.

The 88th RRC has not received any Notice of Violations for any of its DERA sites.

Marion LTA property has been listed on the Federal Facilities Hazardous Waste Compliance Docket since 12 June 2000. A PA/SI has been completed at the Marion LTA. A Human Health/Ecological Risk Assessment (HH/ERA) has been completed. A Supplemental SI was completed in 2005 and finalized (with OEPA comments) in 2006. An EE/CA action memorandum is being prepared and will be reviewed by OEPA.

Kings Mills, Ohio, was listed on the Federal Facilities Hazardous Waste Compliance Docket on 29 December 2000. A Feasibility Study has been completed. A DPHVE pilot study and Supplemental SI were completed in 2005 and finalized (with OEPA comments) in 2006.

A PA/SI was completed at Granite City, Illinois (GC-1).

## ***IRP Cleanup Exit Strategy***

A PBC contract was issued by USAEC in 2004. The PBC contract included Marion LTA, Kings Mills and Milwaukee USARC sites. IRP sites (Marion LTA, Kings Mills and Milwaukee USARC) are proposed for response complete (RC) by September 2007. Cleanup and exit strategy for Granite City, Illinois (GC-1), will be dependent upon ILEPA requirements. ILEPA will initiate their reviews of the PA/SI upon DSMOA agreement approval in July 2006.

# 88TH REGIONAL READINESS COMMAND

## Installation Restoration Program Site Descriptions

# LTA-01

## DRUM DISPOSAL AREA IN NE CORNER OF LTA

### SITE DESCRIPTION

The Army Reserve operates a 127-acre Local Training Area (LTA) in Marion, Ohio. The LTA was formerly included in the Marion Engineer Depot (MED). Historically, a 60' by 60' bermed area in the eastern portion of the LTA was used by MED workers to regularly burn fuel, oil, solvents, sludges, and debris accumulated during the course of normal operations. Estimates of the burning were approx. 2,000 gal weekly to bi-monthly. Fifty surface-laid drums were removed on 29 March 1999. Approximately 17 of the drums had contents which were either solidified paint waste or sandblast material and were considered characteristic HW based on exceedences for chromium and lead. Soil samples were collected as part of the drum removal. SVOCs, lead and chromium were detected in the soil samples. Construction debris

(dumping of roofing tar, shingles, concrete) has been identified throughout the LTA. A Human Health/Ecological Risk Assessment was conducted. A PA/SI was conducted for the entire 127 acre parcel. The PA/SI activities included geophysical surveys, surface and shallow sub-surface soil sampling. The SI was performed in winter 2000. Surface soil samples from the west and central portions of the LTA indicated RCRA metals and SVOCs above industrial PRGs. No contamination was found at depth. Surface soil samples collected in the disposal and burn areas on the east portion of the LTA indicated predominantly RCRA metals and SVOCs. PCBs and VOCs were found in the surface and shallow sub-surface soils and sediments in LTA-15 (Surface Disposal Site). An Investigation discovered dioxins and furans in the surface soils at LTA-01 and LTA-16. Supplemental SI was completed in 2005. An additional drum was discovered and removed in 2005 during the SI activities. Monitoring wells were installed in September 2005. Two sampling events show no impacts to groundwater. The Draft Supplemental SI report (January 2006) has been submitted to the Ohio EPA. A PBC contract was awarded July 2004.

### CLEANUP STRATEGY

An EE/CA will be developed from existing data and a soil removal action of is planned for 2006.

# COE GROUNDWATER MONITORING WELL #5

## SITE DESCRIPTION

This site is located at 6195 Striker Road and east of the Village of Kings Mills in Deerfield Township, Warren County, Ohio. Historically, some solvents used by the maintenance facility were disposed of directly to the soil surface outside of the facility. This is no longer the method of disposal for these solvents. A limited remedial investigation was conducted (Nov 1995). TCE was found in the soil and groundwater (~300ppb) above regulatory guidelines. The majority of the TCE contamination was observed in the groundwater samples collected at the soil/bedrock interface at a depth between 15 and 20 feet below ground surface. The groundwater TCE plume extends over an area of approximately 200 by 100 feet. None of the original bore holes penetrated the fractured bedrock aquifer underlying the site. In April 1997, a limited RI was performed to assess groundwater contamination in the bedrock aquifer. Two groundwater monitoring wells were installed down gradient of the TCE groundwater plume in the bedrock and sampled. No evidence of contamination was detected in the groundwater samples. An in-situ chemical oxidation process was employed in August 1999 to remediate the site. LTM was performed for two years to evaluate the effectiveness of the treatment and to substantiate the natural attenuation (risk-based closure) of residual contamination. Subsequent groundwater monitoring results have detected rebound concentrations indicating limited success of the in-situ treatment. A "Non-sampling Screening Site Inspection" report was prepared for the site by OEPA (May 2002). EPA Region V prepared a July 2002 letter requesting the USAR to address data gaps identified in this report. The primary data gaps include the lack of surface soil data, contamination source identification, and the lack of analytical results for inorganic constituents in groundwater. PBC contract was awarded July 2004. A Supplemental SI was conducted in 2005 to address data gaps. In addition, a DPHVE pilot study was conducted in 2005 to evaluate the effectiveness of this method as a corrective action. During the DPHVE pilot study, approximately 200 gallons of groundwater was recovered and treated. It was determined that high-vacuum extraction of groundwater with associated on-site treatment is a viable corrective method.

## CLEANUP STRATEGY

Implement DPHVE technology and associated treatment system for groundwater cleanup.

# SITE 1 LANDFILL NO. 1

## SITE DESCRIPTION

This site is located at USARC Milwaukee (Silver Spring).

The Army granted the City of Milwaukee a lease/license to the use of the land as a solid waste landfill from 1957-1966. Two landfill cells were created by the City. The landfill cells are separated by a perennial stream (Lincoln Creek). The WDNR required the Army to investigate and cap the two cells (5/10/94 to 10/3/94).

Groundwater contamination was identified in the landfill cells and the particular COC is vinyl chloride. However, the source appears to be off-site and up gradient (possibly Havenwoods Landfill which is owned by the State). Initial groundwater monitoring was conducted in 1998 to document the effectiveness of the landfill cap. An August 1999, WDNR letter detailed future groundwater monitoring requirements. A January 2000 WDNR letter stated that 4 GWM events must occur (4 quarters in one year, or semi-annual sampling over the next 2 years) to evaluate the effectiveness of the cap. Semi-annual groundwater monitoring was performed in 2001 and 2002. In 2004, a PBC contract was awarded to Kemron. Kemron reviewed all environmental documentation and prepared a Technical Memorandum which was submitted to WDNR in December 2005. The Technical Memorandum summarized evidence to support that COCs in the groundwater are emanating from an up gradient and off-site source and that groundwater monitoring requirements should be rescinded as the Army has no liability. The WDNR response did not concur with the Army's position and the site is presently in negotiation.

## CLEANUP STRATEGY

Resolve issues with the State and close the site without any further investigation.

**Bldg T110, 211, 202, 105, 405, 402, 411, 403**

**SITE DESCRIPTION**

The former Charles Melvin Price Support Center (CMPSC) was originally referred to as the Granite City Engineer Depot. The site is located adjacent to the Mississippi River and east of St. Louis, MO. The Engineer Depot was active from 1943 to 1971. Engineer equipment, railroad equipment and vehicle maintenance (modification and overhaul) comprised the majority of industrial operations at the Depot. These operations were primarily performed in Bldg 203 and surrounding vicinity on the post. Additional operations included machining parts, painting, engine cleaning, preservation and packing, welding, forging parts, battery servicing, steam cleaning, sandblasting, and metal plating. Mechanical and electronic maintenance of missile systems (NIKE) occurred on-site beginning in the mid-1960s. Electroplating also reportedly occurred between 1970 and 1971.

**RIP: 200810**

**RC: 201009**

In 2002, a 12-acre parcel of land was placed under the jurisdiction of the US Army Reserve, 88th Regional Readiness Command. The former locomotive repair facility (Bldg 203), an inactive heating plant (Bldg 202) and a former gasoline station were included in the 12-acre parcel. A Preliminary Assessment/Site Investigation was conducted on the 12-acre parcel (2005). Soil contamination on the site has been identified. Sources appear to be activities related to historic locomotive engine overhaul, the former gasoline station, and the former coal storage area and in the vicinity of the inactive heating plant. Known contaminants include petroleum hydrocarbons, semi-volatile organic compounds (SVOCs), volatile organic compounds (VOCs) and metals.

**CLEANUP STRATEGY**

Conduct RI/FS to determine the nature and extent of soil contamination. Cleanup alternatives will be evaluated in a Feasibility Study. It is anticipated that soil excavation and quarterly groundwater monitoring will be required for two years.

## Military Munitions Response Program

## MMRP Summary

**Total AEDB-R MMRP Sites/AEDB-R sites with Response Complete:** 4/0

**AEDB-R Site Types:**

3 Small Arms Ranges

1 Unexploded Munitions Ordnance

**Most Widespread Contaminants of Concern:** MEC, MC

**Media of Concern:** Soil

**Total MMRP Funding**

Prior years (up to FY05): \$ 0K

Current Year (FY06): \$ 0K

Future Requirements (FY07+): \$6,975K

\$6,975K

**Duration of MMRP:**

Year of MMRP Inception: 2002

Year of MMRP RC: 2017

Year of MMRP Completion Including LTM: 2017

---

## MMRP Contamination Assessment

### ***MMRP Contamination Assessment Overview***

During the Army-wide Closed, Transferred, or Transferring (CTT) Range Inventory, four MMRP sites were identified at Fort Snelling, Minnesota.

### ***MMRP Cleanup Exit Strategy:***

Additional investigation is planned in FY07.

### 2003

- Final US Army Closed, Transferring and Transferred Range/Site Inventory for 88th Regional Support Command, Minnesota, engineering-environmental Management, Inc., November

### 2005

- MMRP Historical Records Review, Fort Sheridan, engineering-environmental Management, Inc., December

### 2006

- Draft Workplan, Site Inspection Munitions Response Sites, engineering-environmental Management, Inc., January

# 88TH REGIONAL READINESS COMMAND

## Military Munitions Response Program Site Descriptions

# FTSNG-001-R-01 NEW RIFLE RANGE

## SITE DESCRIPTION

The 477.86 acre rifle range was used from 1885 until 1915 for small arms training and the direction of fire was from north to south. The site is located approximately 2000 feet east of the end of the 30 L runway at the Minneapolis - St. Paul International Airport. The New Rifle Range overlaps a portion of the Trench Area. No UXO is known to have been found during construction of the Minneapolis - St. Paul International Airport. This area is currently an undeveloped part of the Minneapolis - St. Paul International Airport airfield.

## CLEANUP STRATEGY

Conduct RI/FS. Soil excavation and disposal (~4000 cy) was identified as a potential requirement in the CTT range report.

## STATUS

**REGULATORY DRIVER:** CERCLA

**RAC Score:** Negligible Risk

**CONTAMINANTS OF CONCERN:**  
MEC, MC

**MEDIA OF CONCERN:** Soil

# FTSNG-002-R-01 RIFLE RANGE (1885)

## SITE DESCRIPTION

The 5.17 acre portion of the Rifle Range was used from the 1880s through 1935 for small arms training. The firing points were located on what is now the west side of Area D used by the Minnesota Air National Guard and the direction of fire was from southeast to northwest. The range fan extends across the end of the 22 runway at the Minneapolis - St. Paul International Airport and approximately 1200 feet into Area N belonging to the US Air Force. For the purpose of this US Army CTT inventory, the range fan was cut off at the property boundary of the US Air Force, approximately 500 meters northwest of the firing point. Only the area transferred to non-DoD ownership is the responsibility of the Army. No UXO is known to have been found during construction of the Minneapolis - St. Paul International Airport. The area is currently being used as an airfield.

## CLEANUP STRATEGY

Conduct RI/FS. Soil excavation and disposal (~334 cy) was identified as a potential requirement in the CTT range report.

## STATUS

# FTSNG-003-R-01 RIFLE RANGE (1885)-TD

## SITE DESCRIPTION

The 62.71 acre Rifle Range was used from the 1880s through 1935 for small arms training. The firing points were located on what is now the west side of Area D used by the Minnesota Air National Guard and the direction of fire was from southeast to northwest. The range fan extends across the end of the 22 runway at the Minneapolis - St. Paul International Airport and approximately 1200 feet into Area N belonging to the US Air Force. Only the area transferred to non-DoD ownership is the responsibility of the Army. No UXO is known to have been found during construction of the Minneapolis - St. Paul International Airport. The area is currently being used as an airfield.

## CLEANUP STRATEGY

Conduct RI/FS. Soil excavation and disposal (~995 cy) was identified as a potential requirement in the CTT range report.

## STATUS

# FTSNG-004-R-01 TRENCH AREA

## SITE DESCRIPTION

This site is located in former areas of Ft. Snelling, Minnesota (Minneapolis). The 42.46 acre trench training area was used for trench warfare training from 1917 until 1946. The New Rifle Range overlaps a portion of the Trench Area. The site is located approximately 1500 feet southwest of parking ramp R at the Minneapolis - St. Paul International Airport, and 2000 feet east of 34th Avenue South. No documented evidence of specific munitions types were discovered during the site visit. However, 88th RRC personnel thought that pyrotechnics, riot control agents and small arms were probably used in this training area. The site is now a National Cemetery. No UXO is known to have been uncovered during operations or maintenance of the cemetery.

## CLEANUP STRATEGY

Conduct RI/FS. Soil excavation and disposal (~2427 cy) was identified as a potential requirement in the CTT range report.

## STATUS

**REGULATORY DRIVER:** CERCLA

**RAC Score:** Negligible Risk

**CONTAMINANTS OF CONCERN:**

**Total MMR Program Cost (from inception to completion of the MMRP): \$6,975K**

---

## Community Involvement

The 88th RRC is currently a stakeholder in a RAB hosted by the COE FUDS Program, along with the community of Marion, OH for sites at LTA, Marion Engineering Depot and the Scioto Ordnance Plant (MED/SOP). Formerly, the 88th RRC was a co-chair for this RAB (beginning on July 26, 2001). When USAEC began centrally-managing the Marion project in 2004, the 88th resigned as co-chair and was replaced by the COR of the PBC. The 88th RRC is a stakeholder for the Fort Sheridan, IL BRAC Closure Team (BCT). The 88th participates in monthly BCT Meetings and quarterly RAB meetings.
